## **Oxygenetix Breathable Foundation and Moisturizer: How to use Oxygenetix in tandem with Biophora Products**

Oxygenetix Breathable Foundation is a breakthrough foundation to cover, help heal and minimize the appearance of procedural scars. Designed for doctors, Breathable foundation covers and treats a wide variety of skin problems: skin injuries, wounds, rashes, and other skin conditions. On post-surgical scars, patients are reassured and impressed that after-care includes safely camouflaging any evidence of surgery. "Ceravitae", the super charged oxygen complex in Breathable foundation, proliferates collagen cell and connective tissue growth in aging or wounded skin.

Of course cosmetic surgery can improve skin appearance, but minimizing downtime and scarring following surgery was of principle importance in the development of Oxygenetix Breathable Foundation. Oxygenetix' FDA licensed laboratories and genetics and formulary scientists teamed up with cosmeceutical designer Barry Knapp in formulating and testing this revolutionary foundation. There has never been a makeup developed that gives compromised or aging skin so many benefits. Benefits that can directly affect a procedures results, both physically and psychologically.

### **Breathable Pro-healing Oxygenating Moisturizer**

Oxygenating Face Moisturizer contains the same breathable "second skin" formula as the Oxygenating Foundation. Some moisturizers sink into the skin or sit on the surface, which can minimize the vital flow of oxygen. Oxygenetix Face Moisturizer provides instant hydration while reducing the signs of a procedure. It helps plump the skin leaving the perfect palette for Oxygenating Foundation while ensuring the skin receives maximum hydration and protection.

### **Medical Use:**

The main feature of both the Oxygenating Moisturizer as well as Oxygenetix Foundation is their **healing properties**. Use both post-procedure including:

- CO2 Laser • Rhinoplasty • Laser Hair Removal • Acne/Rosacea Treatments • Chemical Peels
- Facial Surgery Bruising • Scar Revision • Skin Resurfacing • Injectables • Eye Surgery • Dermabrasion

For treatments that require healing and coverage – consider including **the price of moisturizer and foundation with the price of the patient's laser or treatment package**. This combination accelerates healing time while providing excellent, natural looking coverage.

### **Everyday Use:**

Many Biophora product users will want to wear Oxygenetix Foundation as a compliment to Biophora products which are designed to improve the appearance of fine lines and aging, dry/sensitive skin, acne and scarring, rosacea and hyperpigmentation. Oxygenetix performs synergistically with Biophora moisturizers for a smooth flawless finish. For Dry/Sensitive Skin (or post-procedure), use calming products and apply Intense Hydration or DermaRich Moisturizer. For normal skin, use Element Exposed / Normal Aging products including Light Hydration or Antioxidant Moisturizer under Oxygenetix. For oily skin use the Acne/Oily product line and apply Light Hydration or Antibac Veil under the foundation. Moisturizer preference may vary based on climate and desired smoothness of application. For everyday use, Biophora moisturizers are cost-effective and provide excellent hydration. **But for post care, Oxygenating Moisturizer is the very best option for its soothing, breathability and healing properties.**

### **Application of Oxygenetix with Moisturizer:**

Apply the appropriate moisturizer (and SPF for everyday use). Then apply a minimum of ½-1 pump of Oxygenetix Foundation (or if in the rare case more than one colour is required to achieve desired shade, mix ½ pump each or desired ratio) onto the back of the hand and blend over entire face. For especially dry skin types, mix a pea-size amount of the appropriate moisturizer along with Oxygenetix Foundation on the back of the hand and then blend onto an already moisturized face. Apply as preferred with a flat or round foundation brush, a sponge, or clean finger tips and blend evenly. Proceed with remaining makeup application steps as desired. **For therapeutic application**, use gloved fingertips and gently stipple over red areas and layer as needed to achieve desired coverage. Do not peel or disturb flaking or irritated skin post-procedure; apply moisturizer and foundation as directed by a physician or trained Oxygenetix Technician.
